CONSIDER BLACKLAKE MANAGEMENT ASSOCIATION REQUEST

ITEM

Consider request from Blacklake Management Association to continue Water Rate Protest Hearing for 90 days [PROVIDE POLICY GUIDANCE]

BACKGROUND

Attached is a letter from the Blacklake Management Association requesting a minimum 90 day delay for the Protest Hearing scheduled for January 28, 2009. It is staff's understanding that one of the issues being studied at the time the letter was written was possible detachment from NCSD and that the Management Association initially allocated \$12,500 to study the legal and engineering feasibility of detachment. It is also staff's understanding that the Management Association rescinded this funding allocation at its December 30th meeting. Current discussions at Blacklake seem to be focused on the political leverage inherent to being a separate fund.

Should your Honorable Board agree to a continuance, it would be possible to merge the two systems and to provide an one month window for Blacklake Property Owners to decide if they wished to pre-pay the buy-in surcharge prior to the July 1st deadline if the protest hearing were held no later than May 13, 2009

FISCAL IMPACT

Staff estimates that the cost of republishing the notice for a delayed Protest Hearing would be approximately \$800.

RECOMMENDATION

Staff recommends that the Board deny the request. Staff believes that this issue has been discussed at great length and that it is time for the property owners to decide if they wish to be merged with the Town System or if they wish to have a stand-alone system/fund.

BLACK LAKE MANAGEMENT ASSOCIATION

498 Colonial Place, Black Lake Village, CA. 93444

Phone & Fax: 805-929-6323

December 19, 2008

Mr. Bruce Buel, General Manager
Nipomo Community Services District Board
148 S. Wilson Street
Nipomo, CA 93444

Subject: Notice of Proposed Action to Merge the Blacklake Water Division with the
Town Water Division dated December 9, 2008.

Dear Mr. Buel and NCSD Board members,

On behalf of the Blacklake Management Association I am respectfully requesting a
minimum 90-day delay for the Public Hearing scheduled for January 28.

At a meeting of the BLMA HOA on December 16, 2008, the BLMA Board, upon request
of a majority of homeowners present, voted to request the extension to allow our
community to make sound intelligent decisions regarding Blacklake's future water needs.

The BLMA Board believes that our community can be provided valuable information
upon which they can reach a consensus within this 90-day period.

We trust you will understand our need to provide viable information and full disclosure to
our community.

Sincerely,

Nancy Fleming
BLMA President

ADOPT RESOLUTION IMPLEMENTING BLACKLAKE SEWER RATE INCREASE

ITEM

Consider adoption of resolution implementing the Blacklake Sewer Rate Increase [ADOPT RESOLUTION]

BACKGROUND

Attached is a draft resolution implementing the rate increase proposed for customers within the Blacklake Sewer Fund Service Area. Your Honorable Board ordered preparation of this resolution following the December 10, 2008 protest hearing at which there was not a majority protest.

FISCAL IMPACT

Adoption of the Resolution would provide for the funding necessary for operation of the system.

RECOMMENDATION

Staff recommends that the Board approve the attached resolution.

ATTACHMENT – DRAFT RESOLUTION

t:\documents\board matters\board meetings\board letter 2009\BL Sewer Rate Increase 090114.doc

NIPOMO COMMUNITY SERVICES DISTRICT
RESOLUTION NO. 2009-XXXX BI-MONTHLY SEWER RATES
(Blacklake Division Only)

A RESOLUTION OF THE BOARD OF DIRECTORS
OF THE NIPOMO COMMUNITY SERVICES DISTRICT
AMENDING APPENDIX A TO CHAPTER 4.12 OF THE
NIPOMO COMMUNITY SERVICES DISTRICT CODE TO
INCREASE SEWER RATES WITHIN THE BLACKLAKE DIVISION
AND ESTABLISH LOAN SURCHARGE REPAYMENT PROGRAM

WHEREAS, it is a major responsibility of the Nipomo Community Services District ("District") to maintain adequate levels of revenue, equitably collected to meet the District's financial commitments for the operation and maintenance for Blacklake Division sewer facilities and the replacement of existing facilities in the future which benefit the customer or property being charged; and

WHEREAS, the District retained The Reed Group, Inc. to evaluate Blacklake sewer rates and charges and to develop a 5 (five) year financial plan. The Blacklake Financial Plan includes estimated operating and maintenance costs, anticipated debt service obligations, and capital program needs covering a period from FY08-09 through FY12-13. The initial financial plan was reviewed by a committee of Blacklake residents. The committee recommended certain changes to the initial financial plan that were included in the Blacklake Sewer System Financial Plan and User Rates dated September 30, 2008 (Blacklake Financial Plan) that was approved by the District Board of Directors on October 8, 2008; and

WHEREAS, The Blacklake Financial Plan, among other things:

A. Deferred nearly \$370,000 (three hundred and seventy thousand dollars) in planned capital improvements until after FY12-13. The deferred projects include the next pond liner replacement, the Woodgreen Lift Station Access project, and the Golf Course Trunk Line project; and

B. Included a recommendation that the Blacklake Sewer Operating Fund obtain a \$275,000 (two hundred and seventy-five thousand dollar) loan in order to provide the funds needed to correct the financial deficit in the Blacklake sewer enterprise. The Financial Plan recommended that the loan be repaid through a special surcharge to be applied to each customer's utility bill with the provision that customers be allowed to prepay the amount owed with a lump sum payment (thereby avoiding interest costs), or repay the loan over a 10-year period.

WHEREAS, Government Code §61115 authorizes the District to adopt rates and charges by Resolution; and

NIPOMO COMMUNITY SERVICES DISTRICT
RESOLUTION NO. 2009-XXXX BI-MONTHLY SEWER RATES
(Blacklake Division Only)

A RESOLUTION OF THE BOARD OF DIRECTORS
OF THE NIPOMO COMMUNITY SERVICES DISTRICT
AMENDING APPENDIX A TO CHAPTER 4.12 OF THE
NIPOMO COMMUNITY SERVICES DISTRICT CODE TO
INCREASE SEWER RATES WITHIN THE BLACKLAKE DIVISION
AND ESTABLISH LOAN SURCHARGE REPAYMENT PROGRAM

WHEREAS, on December 10, 2008, the District conducted a duly noticed public hearing wherein the Board of Directors considered public comment in support and in opposition to the proposed rate increase and whether or not a majority protest to the proposed rate increase and loan repayment surcharge exists pursuant to Section 6 of Article XIII D of the California Constitution. At the conclusion of the public hearing, the Board found that approximately 13 (thirteen) written protests were received and that a majority protest did not exist. The Board further set January 14, 2009 as the date to consider the adoption of a Resolution implementing the rate increase and the sewer loan surcharge and repayment program; and

WHEREAS, based on facts and analysis presented in the Blacklake Financial Plan, written protests received prior to the close of the December 10, 2008 public hearing, the Staff Report, Staff Presentation and public testimony received, the Board of Directors finds:

A. The public hearing adopting this Resolution has been properly noticed pursuant to Government Code §54954.2 (The Brown Act).

B. The rates and charges adopted by this Resolution:

1. Are for the purposes of meeting operation, maintenance and capital replacement expenses for providing sewer collection and treatment for District Blacklake Division customers.
2. Do not exceed the funds required to provide sewer collection, treatment and disposal within the Blacklake Division.
3. Do not exceed the proportional cost of services attributable to those parcels receiving sewer service with the Blacklake Division.

NOW, THEREFORE, BE IT RESOLVED, DETERMINED AND ORDERED, by the Board of Directors of the District as follows:

Section 1. Incorporation of Recitals.

The Recitals are true and correct and incorporated herein by this reference. The Recitals and referenced reports and studies contained therein constitute and support the findings of the District in support of this Resolution.

NIPOMO COMMUNITY SERVICES DISTRICT
 RESOLUTION NO. 2009-XXXX BI-MONTHLY SEWER RATES
 (Blacklake Division Only)

A RESOLUTION OF THE BOARD OF DIRECTORS
 OF THE NIPOMO COMMUNITY SERVICES DISTRICT
 AMENDING APPENDIX A TO CHAPTER 4.12 OF THE
 NIPOMO COMMUNITY SERVICES DISTRICT CODE TO
 INCREASE SEWER RATES WITHIN THE BLACKLAKE DIVISION
 AND ESTABLISH LOAN SURCHARGE REPAYMENT PROGRAM

Section 2. Blacklake Sewer Rates.

Appendix A to Chapter 4.12 of the District Code (Blacklake Division Bi-Monthly Sewer Rates and Charges) is hereby repealed in its entirety and replaced with the sewer rates and charges reflected in Exhibit "A", attached hereto and incorporated into this Resolution by reference.

Section 3. Loan Surcharge Repayment Program.

A. As provided in the Financial Plan and prior notices, a \$275,000 (two hundred and seventy-five thousand dollar) interfund loan from the Property Tax Fund #600 account is hereby approved.

B. The loan shall be repaid through bi-monthly loan surcharges applied to Blacklake customers' sewer utility bills for a ten-year period as referenced in the below chart. The loan shall be fully repaid with interest at 3.5%.

C. As referenced below, Blacklake customers shall be given the opportunity to prepay their share of the loan with a lump sum payment, thereby avoiding interest costs and the bi-monthly surcharge.

**Nipomo Community Services District
 Blacklake Sewer Loan Surcharge**

Lump Sum Payment	
<u>Residential Accounts (per DU)</u>	
Single Family	\$ 489.00
Multi-Family	\$ 489.00
<u>Non-Residential Accounts</u>	
1" Meter	\$ 489.00
1 ½" Meter	\$ 1,468.00
2" Meter	\$ 2,350.00
Bi-Monthly Loan Surcharge	
	10 years
<u>Residential Accounts (per DU)</u>	
Single Family	\$ 9.69
Multi-Family (per DU)	\$ 9.69
<u>Non-Residential Accounts</u>	
1" Meter	\$ 9.69
1 ½" Meter	\$ 29.08
2" Meter	\$ 46.52

D. Blacklake sewer customers shall be given the opportunity to prepay their share of the loan surcharge during the month of April 2009. District staff is directed to provide notice to Blacklake sewer customers of the opportunity to prepay the loan surcharge.

NIPOMO COMMUNITY SERVICES DISTRICT
RESOLUTION NO. 2009-XXXX BI-MONTHLY SEWER RATES
(Blacklake Division Only)

A RESOLUTION OF THE BOARD OF DIRECTORS
OF THE NIPOMO COMMUNITY SERVICES DISTRICT
AMENDING APPENDIX A TO CHAPTER 4.12 OF THE
NIPOMO COMMUNITY SERVICES DISTRICT CODE TO
INCREASE SEWER RATES WITHIN THE BLACKLAKE DIVISION
AND ESTABLISH LOAN SURCHARGE REPAYMENT PROGRAM

Section 4. Repeal of Prior Ordinances and Resolutions.

All Ordinances, Resolutions and sections of Ordinances and Resolutions that are inconsistent with this Resolution are hereby repealed.

Section 5. Effect of Repeal on Past Actions and Obligations.

This Resolution does not affect prosecutions for violations committed prior to the effective date of this Resolution, does not waive any fee or penalty due and unpaid on the effective date of this Resolution, and does not affect the validity of any bond or cash deposit posted, filed or deposited pursuant to the requirements of any prior Resolution or Ordinance.

Section 6. CEQA Findings

The Board of Directors of the District finds that the rates and charges adopted by this Resolution exempt from the California Environmental Quality Act pursuant to Public Resources Code § 21080(b)(8) and CEQA Guidelines Section 15273. The District General Manager is directed to prepare and file appropriate notices.

Section 7. Severance Clause.

If any section, subsection, sentence, clause or phrase of this Resolution is for any reason held to be unconstitutional, ineffective or in any manner in conflict with the laws of the United States, or the State of California, such decision shall not affect the validity of the remaining portions of this Resolution. The Governing Board of the District hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses or phrases be declared unconstitutional, ineffective, or in any manner in conflict with the laws of the United States or the State of California.

SOUTHLAND WWTF UPGRADE PROJECT ENVIRONMENTAL REVIEW

ITEM

Review Southland Wastewater Upgrade Project Initial Study, select process for CEQA compliance, retain hydro-geologic consultant to perform research, and authorize request for proposals for environmental review [RECOMMEND APPROVAL OR TAKE ALTERNATE ACTION]

BACKGROUND

Attached is a revised Initial Study evaluating the proposed project. An earlier version of this Initial Study was reviewed by the Southland Upgrade Project Committee in November and that draft was edited per direction of the Committee. As detailed in the revised Initial Study, the project could result in significant adverse environmental impacts related to Land Use and Planning, Population and Housing, Water, Air Quality, Biological resources, Utilities, and Cumulative Impacts.

Also attached are two proposals for Hydro-Geologic evaluation of the Kaminaka and the Pasquini Properties. The work set forth in these proposals is designed to provide the information required for adequate environmental review and feasibility of these two properties as alternate disposal sites. Fugro proposes to spend \$81,100 on the Kaminaka Property and \$128,800 on the Pasquini Property.

The Southland Upgrade Project Committee is scheduled to review these issues at 2pm on Monday January 12, 2009 at the NCSD Office. Staff will provide minutes of the meeting to the Board at the Board Meeting.

FISCAL IMPACT

If the Board determines that an EIR is required staff estimates the cost for consultant services at \$60,000. Approval of the two hydro-geologic studies would cost \$209,900. Funding for both expenditures is available in Fund 710 (Town Sewer Capital) in the adopted FY08-09 Budget.

RECOMMENDATION

Staff recommends that the Board approve determine that an EIR be prepared, authorize execution of two agreements with Fugro to perform the tasks set forth in the two proposals on a time and materials basis with a not-to-exceed total expenditure limit of \$209,900, and authorize staff to circulate a RFP for professional services relative to processing CEQA.

III.	PROJECT DESCRIPTION.....	III-1
IV.	ENVIRONMENTAL SETTING.....	IV-1
V.	ENVIRONMENTAL EVALUATION.....	V-1
VI.	ENVIRONMENTAL DETERMINATION.....	VI-1
VII.	CERTIFICATION	VII-1

I. INTRODUCTION AND PURPOSE

This Expanded Initial Study assesses the potential environmental impacts associated with the proposed Nipomo Community Services District (NCSD or District) Southland Wastewater Treatment Facilities Improvements. The Nipomo Community Services District, as Lead Agency for this environmental document, has the responsibility for determining whether or not to approve the construction and operation of additional wastewater collection, treatment and disposal facilities within the District. These additional facilities include pipelines, upgraded treatment facilities, percolation ponds and other infrastructure.

As part of their decision-making process, the Nipomo Community Services District is required to review and consider the potential environmental effects that could result from this project. Together with any previously-prepared technical studies, pertinent correspondence or other environmental documents, this analysis will serve as the initial environmental review for the proposed project. This review is required by the California Environmental Quality Act of 1970 (CEQA) as amended (Public Resources Code Section 21000 et. seq.) and the State CEQA Guidelines as well as Guidelines for the Implementation of CEQA adopted by the Nipomo Community Services District.

The Nipomo Community Services District is preparing this Expanded Initial Study to assist in their consideration of whether to prepare a Negative Declaration, a Mitigated Negative Declaration or an Environmental Impact Report for this project. In the event that an EIR is required, this Initial Study will focus the EIR on the effects determined to be potentially significant, identify any impacts determined to not be significant, describe the anticipated extent of analyses within the EIR and to assist the public and other responsible agencies in their evaluation of the proposed project and their formulation of initial environmental concerns in response to the Notice of Preparation. This Expanded Initial Study will be the final environmental document for the proposed project pursuant to CEQA requirements if a Negative Declaration or a Mitigated Negative Declaration is required.

This Expanded Initial Study has been prepared in a manner which provides complete and adequate California Environmental Quality Act (CEQA) coverage for all actions and approvals associated with the proposed project. These actions include review and approval of detailed plans for pipelines, upgraded treatment facilities, percolation ponds and other infrastructure, certification of the required environmental documentation and the required Mitigation Monitoring Program by the Nipomo Community Services District and permits from other various regulatory agencies.

This Expanded Initial Study begins with Section I. Introduction and Purpose, which provides an introductory discussion of the purpose and scope of the document. Section II. Summary summarizes the proposed project, lists the potentially significant

I. Introduction and Purpose

Southland Wastewater Treatment Facilities Improvements Expanded Initial Study

environmental impacts and provides guidance as to the appropriate environmental document to provide complete and adequate CEQA coverage for all actions associated with the proposed project.

Section III. Project Description provides a detailed description of the proposed NCSO Southland Wastewater Treatment Facilities Improvements. Section IV. Environmental Setting provides an overview description of existing environmental conditions within the project area.

Section V. Environmental Evaluation contains the environmental checklist required by Section 15063(d)(3) of the State CEQA Guidelines. This checklist is intended to determine the nature and extent of various environmental effects of the proposed project followed by an explanation to justify the determination. Checklist items identified as “potentially significant” or “potentially significant unless mitigation incorporated” are discussed in greater detail. In many instances, project impacts are identified as “no impact” or “less than significant impact.” The summary discussions following the checklist item provides the basis for these determinations. Section VI. Environmental Determination makes the final determination as to whether a Negative Declaration, a Mitigated Negative Declaration or an Environmental Impact Report is appropriate. Section VII. Certification provides the required Lead Agency Certification Statement.

Section 15150 of the State CEQA Guidelines permits an environmental document to incorporate by reference other documents that provide relevant data to the proposal currently being considered. In this case, the District’s Water and Sewer Master Plan Update (dated December, 2007) as well as several other technical documents prepared on behalf of the Nipomo Community Services District provided the basis for several of the impact assessments within this Initial Study and are hereby incorporated by reference.

This Expanded Initial Study provides a full and objective discussion of the potential environmental impacts of the proposed NCSO Southland Wastewater Treatment Facilities Improvements. In preparing this document, the Nipomo Community Services District decision-makers, staff and members of the public will be fully informed as to the potential impacts associated with the proposed project. In accordance with Section 15021 of the State CEQA Guidelines, this document is intended to enable the Nipomo Community Services District, as Lead Agency for this environmental document, to evaluate these environmental impacts in their consideration of the proposed project. The Lead Agency has an obligation to balance possible adverse effects of the project against a variety of public objectives, including economic, environmental and social factors, in determining whether the project is acceptable and approved for development.

Pursuant to California Public Resources Code 21082.1, the Nipomo Community Services District has independently reviewed and analyzed the information contained in this Initial Study prior to its consideration and certification. The conclusions and discussions

I. Introduction and Purpose

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

contained herein reflect the independent judgment of the Nipomo Community Services District to those issues at the time of publication.

I. Introduction and Purpose

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

II. SUMMARY

This Expanded Initial Study assesses the potential environmental impacts associated with the proposed NCSD Southland Wastewater Treatment Facilities Improvements.

A. Project Summary

The proposed project involves the provision of additional facilities necessary to expand the treatment capabilities of the Southland Wastewater Treatment Facility (WTF). The three basic elements of the proposed project involve additional collection facilities, upgraded treatment facilities and expanded disposal capabilities. Proposed collection facilities involve replacement of the existing 12-inch sewer trunk main which runs along South Frontage Road from Division Street to the Southland WTF with a 21-inch pipeline. Proposed treatment facilities improvements to the Southland WTF include upgrading the influent pump station, provision of headworks improvements, reconstruction of two of the existing treatment ponds and utilization of the two remaining treatment ponds for storage, decanting and disposal. These treatment facilities will be powered by a 500 kilowatt solar power generating station. These improvements will increase the treatment capacity of the Southland WTF from its current capacity of 0.9 million gallons per day to 1.4 million gallons per day. The District is evaluating several methods of disposal of remaining effluent after treatment including discharge into percolation ponds, discharge into subsurface disposal systems, surface irrigation, recycling to recreation/open space areas or deep underground injection. Biosolids generated from wastewater treatment will be disposed of through one or a combination of several methods including landfill disposal, land application or composting at a regional composting facility. The proposed project also involves regulatory and public education efforts aimed at reducing salt loading from regenerative water softeners within the District. (See Section III. Project Description, for additional details concerning the proposed project.)

B. Impact Summary

Provided below is a listing of all impacts identified as either “potentially significant” or “potentially significant unless mitigations incorporated” within this Initial Study (see Section V. Environmental Evaluation).

1. Land Use and Planning
2. Population and Housing
3. Water
4. Biological Resources
5. Aesthetics
6. Cultural Resources
7. Geology
8. Traffic

9. Noise
10. Air Quality
11. Mandatory Findings of Significance

C. Determination

This Expanded Initial Study has been prepared with the intent of identifying any potentially significant environmental impacts associated with the proposed project and assisting the District in their determination of the appropriate level of required environmental documentation. This Initial Study will also assist the public and other responsible agencies in their evaluation of the proposed project and its associated environmental impacts. According to Section 15065 of the State CEQA Guidelines, if a Lead Agency, in this case the Nipomo Community Services District, finds that a project may have a significant impact on the environment, an Environmental Impact Report is required. If the Lead Agency determines that all potential impacts associated with the proposed project are insignificant, a Negative Declaration can be prepared. If certain potentially significant impacts can, through the implementation of mitigation measures, be reduced to a level of insignificance, a Mitigated Negative Declaration is appropriate. Determination of the proper environmental documentation is made after consideration of the impact assessments within Section V Environmental Evaluations. The final determination as to whether a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report is made in Section VI. Environmental Determination of this Initial Study.

III. PROJECT DESCRIPTION

A. PROJECT BACKGROUND

The Nipomo Community Services District (NCSD or the District) was formed in 1965 and currently provides water, wastewater, lighting and solid waste disposal services to approximately 12,000 residents of the Nipomo area. The Nipomo Community Services District is a California Community Services District organized pursuant to Government Code Sections 61000 et. seq. The NCSD's service area overlies the southern portion of the Nipomo area within the unincorporated portion of San Luis Obispo County. The Nipomo Community Services District's authority does not include legislative or executive powers over zoning or land use.

The Nipomo Community Services District owns and operates the Southland Wastewater Treatment Facility (WWTF). This facility treats a combination of domestic and commercial wastewater from the community of Nipomo. The Southland WWTF has a permitted capacity of 900,000 gallons per day (gpd) based on its maximum monthly demand. Average annual flow is 600,000 gallons per day with a maximum monthly flow rate of 800,000 gallons per day.

On February 7, 2006, the District received a Notice of Violation from the Regional Water Quality Control Board (RWQCB) for several effluent water quality violations reported during 2005. In response to this notice, the District prepared an Action Plan (dated May, 2006), a Technical Memorandum (dated July, 2006) and a Draft Wastewater Treatment Master Plan (revised February 19, 2007). These research efforts were intended to evaluate existing and future wastewater treatment demands of the Southland WWTF, identify required improvements to meet these demands and develop a capital improvements program to assist the District in planning and financing these facilities.

In addition, the District has prepared several hydrogeologic studies in order to evaluate the feasibility of a variety of wastewater disposal methods that would be required with an expansion of the existing wastewater treatment plant facilities.

B. PROJECT OBJECTIVES

The basic objective of the proposed Nipomo Community Services District Southland Wastewater Treatment Facilities Improvements is to construct additional collection, treatment and disposal facilities necessary to serve both existing and future wastewater treatment demands generated within the Southland WWTF service area of the Nipomo Community Services District consistent with the South County Area Plan (revised 1994). In so doing, the proposed project will also:

1. Provide reliable, high quality and cost effective wastewater capacity and services to existing and future customers within the District's Town Sewer Service Area.
2. Resolve the current and projected hydraulic surcharge problems in the Division Street and South Frontage Road collection mains.
3. Respond to and remedy any water quality violations associated with prior and current operations of the Southland Wastewater Treatment Facility.
4. Improve the water quality of treated wastewater to comply with current and projected State Discharge Order requirements and to minimize adverse impacts upon Nipomo Mesa groundwater.
5. Manage the average height and volume of the subsurface mound of treated wastewater under the Southland percolation basins and the resultant discharge of groundwater into Nipomo Creek over an annual period.
6. Assist in resolving the Nipomo Mesa water supply deficit by promoting the beneficial use of the treated wastewater to either offset current Nipomo Mesa non-potable water usage and/or, where feasible, to augment productive Nipomo Mesa groundwater aquifers.
7. To the extent feasible, minimize use of additional fossil fuels by offsetting project-related increased power utilization with a more sustainable energy source.
8. Coordinate the timing of project construction to maximize coordination of off-site collection system improvements with the South Frontage Road waterline installation proposed by the District's Waterline Intertie Project.
9. Improve the efficiency and reliability of operations of the Southland Wastewater Treatment Facility.

C. PROJECT LOCATION

The Nipomo Community Services District encompasses approximately seven square miles southeast of the City of Arroyo Grande within the southern portion of San Luis Obispo County (see Figure 1, Regional Map). The proposed project extends from the existing wastewater transmission mains located on South Frontage Road south of Tefft Street and parallel to U.S. Highway 101 in Nipomo. This line leads to the Southland Wastewater Treatment Facility located immediately south of the intersection of South Frontage Road and Southland Street. Proposed disposal sites will be located (at a precise location to be determined at a later date) on the Nipomo Mesa within five miles of the

III. Project Description

Southland Wastewater Treatment Facilities Improvements Expanded Initial Study

Southland Wastewater Treatment Facility (see Figure 2, Vicinity Map and Figure 3, Aerial Photograph).

D. PROJECT CHARACTERISTICS

The proposed project involves the provision of additional facilities necessary to expand the wastewater treatment capabilities of the existing Southland Wastewater Treatment Facility. The proposed project involves three basic elements related to the provision of additional facilities related to wastewater collection, treatment and disposal.

Collection

The existing 12-inch sewer trunk main which runs along South Frontage Road from Division Street to the Southland Wastewater Treatment Facility at Southland Street and South Frontage Road will be replaced with a 21-inch pipeline.

Treatment

The existing Southland Wastewater Treatment Facility (WWTF) currently has a permitted capacity of 900,000 gallons per day (gpd) with an average annual flow of 600,000 gpd and a maximum monthly flow of 800,000 gpd. This facility treats a combination of residential and industrial wastewater utilizing four aeration ponds and eight on-site percolation basins.

Proposed improvements to the WWTF are intended to increase the treatment capacity to 1.4 million gallons per day from the current capacity of 0.9 million gallons per day. This increased treatment capacity is intended to serve both existing and future wastewater treatment demands generated within the Southland WWTF service area of the Nipomo Community Services District.

Specific improvements to the Southland wastewater treatment facility include: 1) upgrading the influent pump station; 2) provision of headworks improvements utilizing screening and grit removal; 3) reconstructing two of the four existing treatment ponds with extended aeration capabilities and collection facilities for biosolids utilizing the Biolac wave oxidation system and 4) use of the two remaining treatment ponds for storage, decanting and disposal of biosolids.

Disposal

The Nipomo Community Services District will expand the existing wastewater disposal capabilities in order to accommodate increased wastewater flows associated with the proposed treatment facilities improvements. The District is evaluating several methods of disposal of remaining effluent after treatment including discharge into percolation ponds,

discharge into subsurface disposal systems, surface irrigation, recycling to recreation/open space areas or deep underground injection.

Biosolids generated from wastewater treatment will be disposed of through one or a combination of methods including landfill disposal, land application or composting at a regional composting facility.

The proposed project also involves regulatory and public education efforts aimed at reducing salt loading from regenerative water softeners within the District. These efforts are intended to reduce salt loading at the Southland WWTF as well as at the off-site percolation ponds.

E. REQUIRED PERMITS AND APPROVALS

The proposed Nipomo Community Services District Wastewater Treatment Facilities involves a series of approvals and discretionary actions by the Nipomo Community Services District, as Lead Agency, and other involved regulatory agencies. The proposed project involves the following approvals by the Nipomo Community Services District:

1. Certification of environmental documentation for the proposed Nipomo Community Services District Wastewater Treatment Facilities.
2. Approval of the Mitigation Monitoring Program for the Nipomo Community Services District Wastewater Treatment Facilities.
3. Review and approval of detailed plans for pipelines, upgraded treatment facilities, percolation ponds and any other infrastructure for the proposed wastewater treatment facilities.

The proposed Nipomo Community Services District Waterline Intertie may also require the following approvals by other involved regulatory agencies including:

4. Section 404 Permits under the Clean Water Act from the U.S. Army Corp of Engineers, which regulates the discharge of dredged and/or fill material into the "waters of the United States."
5. Public Resources Code Sections 1601-1603 Streambed Alteration Agreements from the State of California, Department of Fish and Game, which regulates all diversions, obstructions or changes in the natural flow of a bed, channel or bank of any river, stream or lake which supports fish or wildlife.
6. A National Pollution Discharge Elimination System (NPDES) permit to comply with Section 401 of the Clean Water Act from the State Water Quality Control Board.

III. Project Description

Southland Wastewater Treatment Facilities Improvements Expanded Initial Study

7. A Section 401 Water Quality Certification and a General Permit for Storm Water Discharges from the Central Coast Regional Water Quality Control Board.
8. A Section 7 Consultation or Section 10(a) Permit from the United States Fish and Wildlife Service which allows the “taking” of an endangered species.
9. Easements secured from landowners in the Nipomo area or other entities for right-of-way and construction.
10. Any necessary construction and/or encroachment permits from the County of San Luis Obispo for equipment staging and construction operations.

F. PROJECT TIMING

The proposed project will be constructed within two phases requiring a total of approximately ten months. Phase 1 will involve construction of upgraded collection and treatment facilities. Construction of the upgraded collection facilities (upsized pipeline on Frontage Road) is anticipated to require two months while upgrades to the treatment plant are estimated to require a total of seven months. Phase 2 will involve construction of transmission mains and disposal site. Construction of transmission mains and the proposed disposal site will require one month. Phase I is anticipated to occur in 2010 while completion of Phase II facilities will require substantial additional study with no known timetable as of this date. Several of these construction activities may be performed concurrently. The project engineer recommends that the South Frontage Road pipeline and the upgraded influent pump station be constructed concurrently with the treatment plant headworks improvements.

IV. ENVIRONMENTAL SETTING

The area encompassing the proposed Nipomo Community Services District Southland Wastewater Treatment Facilities Improvements extends from South Frontage Road adjacent to Highway 101 south of Tefft Street to the Southland Wastewater Treatment Facility located south of the intersection of Southland Street and South Frontage Road. Potential wastewater disposal sites are located adjacent to the Southland Wastewater Treatment Facility as well as at locations east, south and west of this facility within the area known as the Nipomo Mesa within South San Luis Obispo County.

- ***Topography***

The project area, located within the Nipomo Mesa, has a surface elevation of approximately 300 feet above mean sea level. Elevation changes are due to smoothly eroded hills and shallow linear valleys. To the north and east is nearly level to gently sloping terrain adjacent to Highway 101 with the southern extent of the Nipomo Mesa rising approximately 100 feet in elevation above the Santa Maria River to a relatively level bluff or mesa.

- ***Geology and Soils***

The Nipomo Mesa is underlain by massive sand dune deposits whose thickness ranges from 150 to 200 feet in depth at certain locations. The project area is located within the seismically-active Central Coast region. Should a major earthquake occur in the area, significant groundshaking is expected to occur. The San Andreas fault is considered the most likely to generate a major earthquake in the region in the near future. Such an earthquake is expected to produce moderate to strong ground shaking in the area.

- ***Drainage***

The project area is located within the Nipomo Creek watershed area which contains approximately 16,318 acres. The project area is characterized by open flat areas, linear valleys and hilly knolls, all with sandy soils. Slopes generally range between zero and five percent with some areas containing localized depressions. The project area lies outside the 100-year flood zone. Drainage in the project area is conveyed by streets and underground pipes in developed areas and via sheet flow at undeveloped locations.

- ***Biological Resources***

Areas on the Nipomo Mesa contain agricultural fields, open grassland vegetation and existing developed areas. Several vegetative communities occur in the project area including: California annual grasslands, eucalyptus, agricultural, ruderal, ornamental and developed. A total of 34 special status plant species are known to occur within the region. A total of 21 special status wildlife species have the likelihood to occur within the project area based upon the presence of suitable habitats.

- ***Land Use***

The project area contains a variety of land uses including low and medium density residential uses, agricultural farmlands, commercial uses and open space. To the north,

areas adjacent to and west of South Frontage Road contain a mix of residential and commercial uses with Highway 101 located to the east. Areas adjacent to the existing Southland Wastewater Treatment Facility include residential uses adjacent to Southland Street to the north and Highway 101 to the east beyond which are residential and agricultural uses. Areas to the south and west contain scattered residences, agricultural uses and vacant open space.

- ***Traffic and Circulation***

Primary access to the project area is provided via State Highway 101, a four-lane freeway served by interchanges at Hutton Road (Highway 166) and Tefft Street. The local circulation system serving the project area include Tefft Street, Southland Street, South Frontage Road, Orchard Road and Joshua Street. With the exception of the four lanes on Tefft Street, all of these local roadways are two lane paved roads.

- ***Noise***

Ambient noise levels in the project area range from the low-30 to mid-60 dBA. Noise sources include traffic on Highway 101, automobile and truck traffic on local roadways, occasional small aircraft and other less obtrusive non-urban noise sources.

- ***Climate***

The climate of the project area can be generally characterized as Mediterranean, with warm, dry summers and cooler, relatively damp winters. Inland areas are characterized by a wide range of temperature conditions. Maximum summertime temperatures generally reach the high 80's and 90's whereas minimum winter temperatures can range down to the low 20's.

- ***Public Services and Utilities***

Law enforcement services for the Nipomo area are provided by the County of San Luis Obispo, Sheriff's Department from their Arroyo Grande Substation located at the South Bay Regional Center in Arroyo Grande. Fire protection and emergency response services for the Nipomo area are currently provided by the Cal Fire / San Luis Obispo County Fire Department. The Nipomo Station 20, located at 450 Pioneer Street in Nipomo (at the corner of Oak Glen and Pioneer Streets near Tefft Street), would be the first station to participate in any fire or emergency response to the project area. This station is equipped with two wildland fire engines (used during the dry season), one Schedule A (on-road) fire engine and a CDF bulldozer.

The Nipomo area is situated within the service boundaries of the Southern California Gas Company for natural gas service and Pacific Gas and Electric Company for electrical service. Existing underground natural gas and electrical mains are located throughout the project area which provide utility services to developed land uses.

The project area is located within the Nipomo Community Services District which provides wastewater treatment, water supply, storm drainage, flood control and lighting services in select portions of the Nipomo area.

- ***Cultural Resources***

The Nipomo area contains more square meters of light density cultural deposits than any other area in southern San Luis Obispo County. Surveys conducted along the south, west and north sides of Nipomo Mesa have recorded many archaeological sites along the edge of the mesa but relatively few in the interior:

V. ENVIRONMENTAL EVALUATION

The following pages contain a checklist based on the format presented in the State CEQA Guidelines. The checklist was used to identify physical changes in the environment which may result from implementation of the proposed project. Impact assessments result in the determination of either “No Impact,” “Less-Than-Significant Impact,” “Potentially Significant Unless Mitigation Incorporated” or “Potentially Significant Impact.” Substantiation for these determinations follows each checklist topic area. These discussions are intended to identify additional required research, available mitigation measures and which impacts remain potentially significant. These discussions will assist the Nipomo Community Services District in their determination of the appropriate level of required environmental documentation.

The determination of “No Impact” applies where the impact is not applicable to the project under consideration. For example, if the project site is not located proximate to areas of volcanic activity then the item asking whether the project would result in or expose people to potential impacts involving volcanic hazards should be marked as “no impact.”

The determination of “Less-Than-Significant Impact” applies where the impact would occur, but the magnitude of the impact is considered insignificant or negligible. For example, a development which would only slightly increase the amount of surface water runoff generated at a project site would be considered to have a less-than-significant impact on surface water runoff.

“Potentially Significant Unless Mitigation Incorporated” applies where the incorporation of mitigation measures may potentially reduce an effect from “Potentially Significant Impact” to a “Less-Than-Significant Impact.” Possible mitigation measures are noted where appropriate within the summary discussion immediately following the checklist item. These impacts can be addressed within either an EIR or a Mitigated Negative Declaration.

The determination of “Potentially Significant Impact” applies where the project impact has the potential to cause a significant environmental impact and there are not sufficient mitigations available to reduce these impacts to a less than significant level. If there are one or more items on the checklist remaining as “Potentially Significant Impact,” an EIR is required.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
I. LAND USE AND PLANNING. Would the proposal:				
a) Conflict with general plan designation or zoning?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with applicable environmental plans or policies adopted by agencies with jurisdiction over the project?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Be incompatible with existing land use in the vicinity?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Affect agricultural resources or operations (e.g., impacts to soils or farmlands or impacts from incompatible land uses)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Disrupt or divide the physical arrangement of an established community (including a low-income or minority community)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *Potentially Significant Impact.* The proposed project involves the provision of additional facilities necessary to expand the treatment capabilities of the Southland Wastewater Treatment Facility (WTF). The proposed project does not involve any required amendments to the South County Area Plan or any other Elements of the County General Plan and does not require any changes to existing zoning. Although the proposed project would not directly cause a change in zoning or an increase in the intensity of currently-designated land uses, the proposed project will increase the wastewater treatment capabilities of the Nipomo Community Services District and could represent a reduction or elimination of a potential constraint upon future development. Any increase in density or change of land use to the South County Area Plan within the areas to be served by the additional wastewater treatment capabilities associated with the proposed project would first require a General Plan Amendment and zone change. A General Plan Amendment would study a variety of land use and environmental issues before being approved or denied including; community character and compatibility, existing land use policies, traffic and circulation impacts, the provision of public services, etc. This process involves significant public involvement and the implementation of CEQA.

Any future development within areas served by these additional wastewater treatment capabilities would also require a number of additional approvals including approval of a Specific Plan, Conditional Use Permit or tract map by the County of San Luis Obispo. These future discretionary approvals will require the preparation and certification of additional environmental documentation pursuant to CEQA

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

requirements in order to address the potential land use and planning impacts of these future approvals.

- b. Potentially Significant Impact.* The proposed project would not directly conflict with any environmental plans or policies adopted by agencies with jurisdiction over the project area. Environmental plans which apply to the project area include the South County Area Plan and other Elements of the County General Plan, the Clean Air Plan (Air Pollution Control District), the Water Quality Control Plan – Basin Plan (Regional Water Quality Control Board) and the Regional Transportation Plan (San Luis Obispo Council of Governments). Since the proposed project would represent a reduction or elimination of a potential constraint upon future development within areas to be served by the proposed wastewater collection, treatment and disposal facilities, it may indirectly conflict with these environmental plans and policies.
- c. Potentially Significant Unless Mitigation Incorporated.* The areas through which the proposed project facilities occur are devoted to a variety of land uses including residential, commercial and agricultural land uses. The proposed project may represent a short-term conflict with these existing uses during project construction activities. Impacts to adjacent land uses due to these temporary construction activities are considered to be short-term and subject to mitigation measures to reduce these impacts to a less than significant level.
- d. Potentially Significant Unless Mitigation Incorporated.* Construction of the proposed wastewater collection, treatment and disposal facilities could occur in areas adjacent to agricultural farmlands. The proposed project may represent a short-term disruption to agricultural-related traffic ingress/egress during project construction. Impacts to ongoing agricultural operations due to temporary construction activities are considered to be short-term and subject to mitigation measures to reduce these impacts to a less than significant level.

Any reduction or elimination of a constraint to development (such as the importation of additional water supplies) can potentially hasten the conversion of vacant or existing agricultural lands, agricultural preserves or areas containing prime agricultural soils to developed uses. Any development in areas served by the additional wastewater collection, treatment and disposal facilities associated with the proposed project beyond the uses currently allowed by the South County Area Plan will require approvals from the County of San Luis Obispo.

- e. No Impact.* The proposed project will not divide any established community.

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
II. POPULATION AND HOUSING. Would the proposal:				
a) Cumulatively exceed official regional or local population projections?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Induce substantial growth in an area either directly or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Displace existing housing, especially affordable housing?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *No Impact.* The proposed project will not directly generate any new population or housing thereby not exceeding any regional or local growth projections.

b. *Potentially Significant Impact.* The proposed project does not directly induce any significant population or housing growth in the area. The proposed project could, however, represent a reduction or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Any increase in residential density beyond that allowed by the South County Area Plan will require a General Plan Amendment and zone change as well as other subsequent approvals by the County of San Luis Obispo. These future discretionary approvals will require preparation and certification of additional environmental documentation pursuant to CEQA requirements in order to address the potential population and housing impacts of these future approvals.

c. *No Impact.* The proposed project will not displace any existing housing.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
III. GEOLOGICAL PROBLEMS. Would the proposal result in or expose people to potential impacts involving:				
a) Fault rupture?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Seismic ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

d) Seiche, tsunami, or volcanic hazard?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Landslides or mudflows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Erosion, changes in topography or unstable soil conditions from excavation, grading, or fill?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
g) Subsidence of the land?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Expansive soils?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Unique geologic or physical features?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *Less-Than-Significant Impact.* The project area lies outside any fault rupture zones established by the Alquist-Priolo Act of 1972. Should a major earthquake occur in the area, significant groundshaking is expected to occur. Since the project area is not located within the boundaries of a special studies zone and no active faults are known to pass through the area, surface fault rupture in the areas devoted to the proposed project facilities is considered unlikely. As such, impacts due to fault rupture on the project area are considered to be less than significant.

b. *Less-Than-Significant Impact.* The San Andreas fault is considered the most likely source of a major earthquake in the region in the near future. Such an earthquake is expected to produce moderate to strong ground shaking within the project area. The application of standard construction techniques contained in the Uniform Building Code to the proposed project facilities will reduce potential seismic hazards to less than significant levels.

c. *Less-Than-Significant Impact.* Due to the seismic and geologic conditions as currently known, the potential for secondary seismic hazards in the project area is considered to be low. The Nipomo Mesa and adjacent coastal areas are underlain by massive sand dune deposits whose thickness ranges from approximately 150 to 200 feet in the project area. Given these conditions, liquefaction potential upon proposed project facilities is considered to be unlikely due to the grain size and density of natural soils and the anticipated compaction of the surficial soils. Potential liquefaction hazards are, therefore, considered to be less than significant.

d. *No Impact.* Tsunamis and seiches do not pose hazards due to the inland location and lack of bodies of standing water in the project area. No areas of known volcanic activity are in proximity to the project area. No impacts regarding seiches, tsunamis or volcanic hazards have been identified.

- e. *Less-Than-Significant Impact.* Landslides within undeveloped portions of the project area are not considered to be likely due to the level to gently sloping topographic conditions. The proposed wastewater collection, treatment and disposal facilities occur in areas of nearly level terrain thereby reducing the potential for landslides or mudflows to a less than significant level.
- f. *Potentially Significant Unless Mitigation Incorporated.* The Natural Resource Conservation Service Soil Survey identifies the potential erodibility of soil types in the project area to be high. While the relatively gentle slopes of the project area reduce the potential occurrence of significant erosion and sedimentation impacts, construction of proposed project facilities may result in soil erosion or the loss of topsoil into local drainages. These potential impacts can be mitigated through the use of temporary berms, sedimentation traps, detention basins and the revegetation of disturbed soils.
- g. *Less-Than-Significant Impact.* Due to the geologic conditions as currently known, the potential for secondary seismic hazards in the project area is considered to be low. The potential for seismically-induced settlement to impact proposed project facilities is low due to the density of underlying earth materials and the anticipated compaction of near surface soils during the construction of project facilities.
- h. *Less-Than-Significant Impact.* Due to the geologic conditions as currently known, the potential for secondary seismic hazards in the project area is considered to be low. The potential for expansive soils to impact proposed project facilities is low due to the density of underlying earth materials and the anticipated compaction of surface soils during construction of project facilities.
- i. *No Impact.* The area through which the proposed wastewater collection, treatment and disposal facilities occur does not contain any unique or geological features that will be impacted by development of the proposed project.
- a.-i. Although the proposed wastewater treatment facilities do not directly impact any geological resources, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact geological resources in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential geological resources impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
IV. WATER. Would the proposal result in:				
a) Changes in absorption rates, drainage patterns or the rate and amount of surface runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Discharge into surface waters or other alteration of surface water quality (e.g., temperature, dissolved oxygen or turbidity)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Changes in the amount of surface water in any water body?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Changes in currents or the course or direction of water movements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations or through substantial loss of ground water recharge?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Altered direction or rate of flow of groundwater?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
g) Impacts to groundwater quality?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
h) Substantial reduction in the amount of groundwater otherwise available for public water supplies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Substantiation:

a. *Less-Than-Significant-Impact.* The proposed wastewater treatment facilities will not result in the addition of a significant amount of impervious surfaces nor do these proposed facilities result in a significant alteration of existing drainage patterns. Potential impacts related to changes in absorption rates, drainage patterns or the rate and amount of surface runoff are considered to be less than significant.

b. *Potentially Significant Impact.* Ongoing use of the existing Southland Wastewater Treatment Facility percolation basins will result in the continued introduction of wastewater effluent into the local groundwater aquifer. A portion of this introduced effluent currently migrates to Nipomo Creek located to the east of the treatment facility. A series of studies have been completed which estimate the amount of current discharge into the Creek and its water quality impacts. However, additional studies are required to determine the extent of impacts upon Nipomo Creek due to the continued introduction of effluent into the aquifer given the changes in treatment technology associated with the proposed project.

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

The proposed wastewater collection, treatment and disposal facilities will also result in short-term landform alteration during project construction which could potentially alter the composition of surface runoff. Project construction activities may temporarily alter the composition of surface runoff through the grading of ground surfaces. This runoff could, without proper mitigation, contribute to the incremental degradation of downstream water quality. Erosion of graded areas and discharge of sediment to downstream areas will occur if project grading operations occur during the wet season or if adequate detention or erosion control facilities are not constructed. Under the authority of the Clean Water Act, the Federal Environmental Protection Agency created the National Pollutant Discharge Elimination System (NPDES) to control the amount and concentration of pollutants in urban stormwater runoff which ultimately drain into the ocean, coastal wetlands or other surface waters. These regulations require that discharges of stormwater from construction activity of five acres or more be regulated thereby requiring a NPDES permit. These potential impacts can be mitigated through the provision of a Stormwater Pollution Prevention Plan (SWPPP) which requires provision of control measures at points of drainage discharge.

- c. *Potentially Significant Impact.* Ongoing use of the existing Southland Wastewater Treatment Facility percolation basins will result in the continued introduction of wastewater effluent into the local groundwater aquifer. A portion of this introduced effluent currently migrates to Nipomo Creek located to the east of the treatment facility. A series of studies have been completed which estimate the amount of current discharge into the Creek and its water quality impacts. However, additional studies are required to determine the extent of impacts upon Nipomo Creek due to the continued introduction of effluent into the aquifer given the changes in treatment technology associated with the proposed project.

The proposed project may include the provision of percolation ponds at one of several potential effluent disposal sites thereby creating additional surface water. Percolation ponds would be created through the construction of earthen berms and graded cut slopes and will have an adequate depth for required storage and adequate surface area to allow for percolation. Additional studies are required to determine the selected effluent disposal alternative.

- d. *No Impact.* Given the relatively small area disturbed by the proposed project, changes in the currents or the course or direction of water movement are considered to be negligible.
- e. *Potentially Significant Impact.* The proposed project will not involve the withdrawal of groundwater or grading that would intercept any groundwater aquifers, thereby not affecting existing groundwater supplies. The proposed project will ultimately result in the increased percolation of treated wastewater effluent into the

groundwater basin due to the increased treatment capability at the Southland Wastewater Treatment Facility. This increased wastewater percolation will provide an additional source of water supply into the groundwater basin and may represent a significant but potentially beneficial impact. Since little in the way of impervious surfaces will be created by the proposed project facilities, loss of groundwater recharge is considered less than significant.

f. Potentially Significant Impact. The proposed project will not involve the direct withdrawal of groundwater. The direction or rate of flow of groundwater could be altered due to the introduction of additional water into the groundwater basin resulting from the increased percolation of treated wastewater effluent. With the increased treatment capacity at the Southland Wastewater Treatment Facility, increased wastewater percolation will provide an additional source of water supply into the groundwater basin. This may represent a significant but potentially beneficial impact.

g. Potentially Significant Impact. The proposed project will not involve the direct withdrawal of groundwater. The introduction of treated effluent into the groundwater basin could potentially impact groundwater quality. The District has prepared several hydrogeologic studies in order to evaluate the feasibility of a variety of wastewater disposal methods. These possible methods of disposal include discharge into percolation ponds, discharge into subsurface disposal systems, surface irrigation, recycling to recreation/open space areas or deep underground injection. Additional studies are required to determine the nature and extent of groundwater quality impacts due to the proposed percolation of treated effluent into the groundwater basin.

The proposed project also involves regulatory and public education efforts aimed at reducing salt loading from regenerative water softeners within the District. These efforts are intended to reduce salt loading at the Southland Wastewater Treatment Facility as well as at the off-site percolation ponds.

h. Less-Than Significant Impact. The proposed project will not involve the direct withdrawal of groundwater which would otherwise be available for public use.

a.- i. Although the proposed wastewater treatment facilities do not directly impact any water resources, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential water resources impacts of these future approvals.

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
V. AIR QUALITY. Would the proposal:				
a) Violate any air quality standard or contribute to an existing or projected air quality violation?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Expose sensitive receptors to pollutants?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Alter air movement, moisture or temperature or cause any change in climate?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create objectionable odors?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Substantiation:

a. *Potentially Significant Unless Mitigation Incorporated.* Temporary air quality impacts will result from project construction activities. Air pollutants will be emitted by construction of the proposed wastewater collection, treatment and disposal facilities. Fugitive dust will be generated during grading required for construction of the proposed 21-inch sewer main along South Frontage Road, the transmission pipeline leading to the selected effluent disposal site. Given the relatively small amount of area disturbed by project construction, the air pollutant emissions generated during grading are expected to be below the APCD significance thresholds. However, several mitigation measures including the use of watertrucks and sprinkler systems, spraying of dirt stockpiles, planting of exposed ground areas, restriction of construction vehicle speed and street sweeping may be required to reduce grading-related project emissions to an acceptable level. Project construction may also generate emissions for which mitigation measures related to the proper use of construction equipment could be required. Since traffic in the project area will not be significantly impacted, the potential for local air quality impacts (i.e. air pollutant concentrations near intersections) will also be less than significant.

A Greenhouse Gas Assessment may be necessary in order to fully identify the cumulative impacts of the generation of greenhouse gases upon global warming/climate change. Within this assessment, the existing emission inventories would be identified and the amount of greenhouse gas pollutants generated by the proposed project in terms of both short-term construction emissions and long-term project emissions would be calculated. Since there are no standards or significance thresholds established by the involved Air Pollution Control Districts or the California Air Quality Resources Board, significant impacts cannot be established at this time. Certain mitigation measures available to the NCSO, such as the currently-proposed use of a 500 kilowatt solar power generating system as the primary power source for

future treatment plant operations can, however, be cited as a significant measure to reduce project-related energy use and greenhouse gas generation.

- b. *Less-Than-Significant Impact.* Given the lack of significant short- or long-term air pollutant generation associated with the proposed project, the potential for exposure of sensitive receptors to air pollutants is considered to be less than significant.
 - c. *No Impact.* The proposed project will not alter air movement, moisture, temperature or cause a change in climate.
 - d. *Potentially Significant Impact.* The selected effluent disposal site has the potential to create objectionable odors that could significantly impact adjacent properties. Localized odors associated with other project construction activities will be confined to construction areas along existing roadways or are located well away from existing residential uses. Additional studies involving the precise design of the selected effluent disposal site should identify measures capable of controlling odors.
- a.-d. Although the proposed wastewater treatment facilities do not directly impact air quality, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact air quality in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential air quality impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VI. TRANSPORTATION/CIRCULATION. Would the proposal result in:				
a) Increased vehicle trips or traffic congestion?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Hazards to safety from design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Inadequate emergency access or access to nearby uses?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Insufficient parking capacity on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Hazards or barriers for pedestrians or bicyclists?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Conflicts with adopted policies supporting alternative transportation (e.g., bus turnouts, bicycle racks)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

g) Rail, waterborne or air traffic impacts?

Substantiation:

- a. *Potentially Significant Unless Mitigation Incorporated.* The proposed wastewater collection, treatment and disposal facilities will generate a minor amount of traffic during construction activities. The traffic generated by project construction activities will involve automobile trips associated with worker commutes, haul trucks and construction equipment. These potential traffic and circulation impacts are considered to be short-term. Traffic flows will not be affected by the long-term operation of project facilities. However, project construction activities may result in the diversion of traffic creating short-term traffic congestion. These potential impacts can be mitigated through the provision of adequate signage, barriers or flagmen to insure a safe diversion of traffic.

- b. *Potentially Significant Unless Mitigation Incorporated.* Project construction activities may result in the short-term diversion of automobile traffic on certain local roadways, particularly along South Frontage Road which is the route of the proposed 21-inch sewer main and the route of the proposed transmission pipeline leading to the selected effluent disposal site. Project construction may also result in the diversion of farm equipment traffic from adjacent agricultural farmlands. These potential impacts which represent a hazard to existing automobile traffic or to the ongoing use of farm equipment in adjacent areas can be mitigated through the provision of adequate signage, barriers or flagmen to insure the safe diversion of existing traffic and farm equipment.

- c. *Potentially Significant Unless Mitigation Incorporated.* Project construction activities will not block or impede emergency access but may temporarily impede access to adjacent properties. These potential impacts can be mitigated through the provision of adequate signage or flagmen to insure access to properties adjacent to roadways subject to project construction activities.

- d. *Less-Than-Significant Impact.* The proposed project may result in the temporary loss of available parking on roadways subject to project construction activities. This loss of parking is considered to be short-term and less than significant.

- e. *Potentially Significant Unless Mitigation Incorporated.* The proposed project may result in the temporary blockage of pedestrian and bicycle routes on roadways which are subject to project construction activities. These potential impacts can be mitigated through the provision of adequate signage, barriers or flagmen to insure the safe diversion of pedestrians and bicyclists.

f. *No Impact.* The proposed project will not conflict with any adopted alternative transportation polices.

g. *No Impact.* The proposed project will not impact any existing rail, waterborne or air traffic operations.

a.-g. Although the proposed wastewater treatment facilities do not directly impact any transportation/circulation facilities, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact transportation/circulation facilities in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential transportation/circulation impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VII. BIOLOGICAL RESOURCES. Would the proposal result in:				
a) Endangered, threatened or rare species or their habitats (including but not limited to plants, fish, insects, animals, and birds)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Locally designated species (e.g., heritage trees)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Locally designated natural communities (e.g., oak forest, coastal habitat, etc.)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Wetland habitat (e.g., marsh, riparian and vernal pool)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Wildlife dispersal or migration corridors?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Adopted conservation plans and policies (e.g., Resource Management Plan)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *Potentially Significant Impact.* The proposed project facilities generally occur in areas containing agricultural fields, open grassland vegetation, developed areas and an existing wastewater treatment facility. Vegetative communities occurring in the project area include California annual grasslands, eucalyptus, agricultural, ruderal, ornamental and developed.

Several special-status plant and wildlife species could be potentially impacted by project construction and operation of proposed wastewater collection, treatment and

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

disposal facilities. A total of 34 special status plant species are known to occur in the region. A total of 21 special status wildlife species have the likelihood to occur within the project area based upon the presence of suitable habitats.

Biological field surveys are required in order to fully identify the nature and extent of potentially significant impacts of the proposed project upon plant and wildlife species found in the project area and any required mitigation measures. Such surveys would focus upon any special status or listed species which are found in areas impacted by the proposed wastewater collection, treatment and disposal facilities.

- b. Potentially Significant Unless Mitigation Incorporated.* The proposed project may impact large eucalyptus trees throughout the area which may represent potential habitat for the Monarch Butterfly or nesting raptors. Avoidance of these areas may be required in order to reduce these potential impacts.
- c. Less-Than Significant Impact.* The proposed project is not expected to directly impact any natural habitat communities which are considered to designated as sensitive.
- d. Potentially Significant Impact.* The selected effluent disposal site may be constructed in areas known to contain vernal pools which provide habitat for California red-legged frog, a Federally-listed Threatened Species. The biological field surveys noted in Item a. above will determine whether the proposed project facilities will impact the California red-legged frog or any other listed or special status plant or wildlife species.
- e. Less-Than-Significant Impact.* Given the relatively small amount of area disturbed by project construction, much of which are located adjacent to existing development and roadways, existing wildlife dispersal or migration corridors will not be significantly impacted.
- f. No Impact.* The proposed project does not conflict with any adopted conservation or wildlife management plans.
- a.-f. Although* the proposed wastewater treatment facilities do not directly impact any biological resources, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact biological resources in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential biological resources impacts of these future approvals.

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VIII. ENERGY AND MINERAL RESOURCES. Would the proposal:				
a) Conflict with adopted energy conservation plans?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Use non-renewable resources in a wasteful and inefficient manner?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the State?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *No Impact.* The proposed project will conform with all applicable State and local energy conservation requirements enforced by the County of San Luis Obispo as well as the Nipomo Community Services District. The proposed project includes the provision of a 500 kilowatt solar power generating system as the primary power source for future treatment plant operations. No impacts regarding any conflict with adopted energy conservation programs have been identified.

b. *Less-Than-Significant Impact.* As noted above, the proposed project includes the provision of a 500 kilowatt solar power generating system as the primary power source for future treatment plant operations. Operations of the selected effluent disposal site will require the use of electric powered pumps which will consume relatively small amounts of electricity. The proposed project is not anticipated to result in the use of non-renewable resources in a wasteful or inefficient manner. Impacts upon non-renewable resources are considered less than significant.

c. *No Impact.* There are no known mineral resources within the project area. The proposed project should have no impact regarding availability of a known mineral resource that would be of future value to the region and the residents of the State.

a.-c. Although the proposed wastewater treatment facilities do not directly impact any energy or mineral resources, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact energy and mineral resources in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential energy and mineral resources impacts of these future approvals.

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
IX. HAZARDS. Would the proposal involve:				
a) A risk of accidental explosion or release of hazardous substances (including but not limited to: oil, pesticides, chemicals or radiation?)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Possible interference with an emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) The creation of any health hazard or potential health hazard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Exposure of people to existing sources of potential health hazards?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Increased fire hazard in area with flammable brush, grass, or trees?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Substantiation:

- a. *Less-Than-Significant Impact.* Current safety regulations governing the construction of the proposed wastewater collection, treatment and disposal facilities will reduce the risk of an accidental explosion or release of hazardous materials to a less than significant level.
- b. *No Impact.* Given the relatively small amount of area disturbed by project construction, the proposed project will not interfere with any emergency response or evacuation plan.
- c. *Less-Than-Significant Impact.* Current safety regulations governing the construction and operation of the proposed project facilities will reduce the potential for creation of health hazards to a less than significant level.
- d. *Less-Than-Significant Impact.* The construction and operation of the proposed wastewater collection, treatment and disposal facilities is not expected to expose people to existing sources of potential health hazards. Project construction is not expected to involve the release of any significant amounts of hazardous materials including oils, pesticides, chemicals or radiation thereby reducing the potential for exposure to health hazards to a less than significant level.
- e. *Less-Than-Significant Impact.* The project will occur in areas of relatively low fire hazard (i.e. agricultural farmlands, residential uses, etc.) and away from areas containing significant flammable vegetation. Safety regulations governing project

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

construction and operations in combination with these relatively low fire hazard conditions reduces potential fire hazards to a less than significant level.

a.-e. Although the proposed wastewater treatment facilities do not directly create any hazards, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could create hazards in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential hazards impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
X. NOISE. Would the proposal result in:				
a) Increases in existing noise levels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Exposure of people to severe noise levels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Substantiation:

a. *Potentially Significant Unless Mitigation Incorporated.* The primary noise source associated with the proposed project which may impact adjacent land uses will be construction noise. Noise resulting from the long-term operation of the proposed wastewater collection, treatment and disposal facilities is expected to be negligible. Construction noise represents a short-term impact upon ambient noise levels. Noise generating construction equipment includes trucks, graders, back-hoes and bulldozers. Grading and trucking activities typically represent the loudest potential sources of construction noise. Local control of construction hours to daylight hours represent the most effective method of controlling construction noise. The County of San Luis Obispo restricts construction activities to the hours of 7 a.m. to 7 p.m. on weekdays and 9 a.m. to 5 p.m. on Saturday. Construction is not allowed on Sundays or holidays. Compliance with this policy as well as the use of proper noise mufflers can reduce these potential short-term construction noise impacts to a less than significant level.

b. *Potentially Significant Unless Mitigation Incorporated.* The County of San Luis Obispo has adopted noise standards of 60 CNEL for exterior land uses and an interior noise standard of 45 CNEL. While construction of the proposed wastewater collection, treatment and disposal facilities is not anticipated to create noise levels that exceed these standards, measures related to maintaining an adequate distance between

stationary noise sources and existing residences or the use of engine enclosures may be required.

a.-b. Although the proposed wastewater treatment facilities do not directly create any noise impacts, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could create adverse noise impacts in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential noise impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XI. PUBLIC SERVICES. Would the proposal have an effect upon or result in a need for new or altered government services in any of the following areas:				
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Police Protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Maintenance of public facilities, including roads?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other governmental services?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *No Impact.* The construction and operation of the proposed wastewater collection, treatment and disposal facilities is not expected to have any impact upon fire protection services currently provided by the Cal Fire / San Luis Obispo County Fire Department.

b. *No Impact.* The proposed project is not expected to have any impact upon police protection services provided by the County of San Luis Obispo Sheriff's Department.

c. *No Impact.* Since the proposed project will not directly generate any school age children, no impacts to schools are anticipated.

d. *Less-Than-Significant Impact.* The proposed project will have a minor impact upon local roadways due to construction activities associated with the proposed pipeline construction along South Frontage Road and for the transmission pipeline leading to the selected effluent disposal site. Given the relatively small amount of area devoted to project construction activities, potential impacts upon the maintenance of public facilities are considered to be less than significant.

e. *No Impact.* The construction and operation of the proposed project will have no effect on any other governmental services.

a.-e. Although the proposed wastewater treatment facilities do not directly impact any public services, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact public services in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential public services impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XII. UTILITIES AND SERVICE SYSTEMS.				
Would the proposal result in a need for new systems or supplies or substantial alterations to the following utilities:				
a) Power or natural gas?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Communications systems?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Local or regional water treatment or distribution facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Sewer or septic tanks?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Storm water drainage?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Solid waste disposal?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Local or regional water supplies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Substantiation:

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

- a. *Less-Than-Significant Impact.* Construction and operation of the proposed wastewater collection, treatment and disposal facilities will require the minimal use of electrical power. The proposed project includes the provision of a 500 kilowatt solar power generating system as the primary power source for future treatment plant operations. Operations of the selected effluent disposal site will require the use of electric powered pumps which will consume relatively small amounts of electricity. This energy demand is not anticipated to be significant and falls within the anticipated service parameters of the involved service providers.
- b. *No Impact.* The proposed project will not involve the use of communications systems.
- c. *Less-Than Significant Impact.* The proposed project will not directly generate demand for water service. However, the proposed project involves regulatory and public education efforts aimed at reducing salt loading from regenerative water softeners within the District. These efforts are intended to reduce salt loading at the Southland Wastewater Treatment Facility as well as at the off-site percolation ponds.
- d. *Potentially Significant Impact.* The proposed project involves the provision of additional facilities necessary to expand the wastewater treatment capabilities of the existing Southland Wastewater Treatment Facility. As such, the proposed project can be viewed as accommodating future demands for wastewater treatment within the Nipomo Community Services District. However, the proposed project could also represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment facilities associated with the proposed project.
- e. *Less-Than-Significant Impact.* The proposed wastewater collection, treatment and disposal facilities will not result in the addition of a significant amount of impervious surfaces which would significantly increase storm water drainage flows.
- f. *Less-Than-Significant Impact.* The proposed increase in wastewater treatment capacity will generate biosolids which will be disposed of through one or a combination of methods including landfill disposal, land application or composting at a regional composting facility.
- g. *Potentially Significant Impact.* The proposed project will ultimately result in the increased percolation of treated wastewater effluent into the groundwater basin due to the increased treatment capacity at the Southland Wastewater Treatment Facility. This increased wastewater percolation will provide an additional source of water supply into the groundwater basin and may represent a significant but potentially beneficial impact.

a.-g. Although the proposed wastewater treatment facilities do not directly impact any utilities and service systems, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact utility and service systems in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential utility and service systems impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIII. AESTHETICS. Would the proposal:				
a) Affect a scenic vista or scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have a demonstrable negative aesthetic effect?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Create light or glare?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Substantiation:

a. *Less-Than-Significant-Impact.* Construction activities associated with the proposed wastewater collection, treatment and disposal facilities will result in short-term visual impact to views from adjacent roadways and developed land uses. None of the roadways adjacent to project construction activities have been designated as scenic highways. Any impacts to scenic vistas due to the proposed project are considered to be less than significant.

b. *Potentially Significant Unless Mitigation Incorporated.* Construction activities associated with the proposed project facilities will have a short-term visual impact upon adjacent roadways and land uses. The proposed 21-inch sewer main along South Frontage Road and the transmission pipeline leading to the selected effluent disposal site will not have significant visual impacts since they will be placed underground. The proposed improvements to the Southland Wastewater Treatment Facility and the proposed effluent disposal site may impact views from adjacent areas. These potential impacts can be mitigated through the use of vegetative screening.

c. *Potentially Significant Unless Mitigation Incorporated.* The proposed improvements to the Southland Wastewater Treatment Facility and the proposed effluent disposal site may include the provision of security lighting which could result in potential light and glare impacts to adjacent areas. These potential impacts can be mitigated through the use of shielded light fixtures which are directed downward and located at the lowest possible level.

a.-c. Although the proposed wastewater treatment facilities do not directly impact any visual resources, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact visual resources in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential aesthetics impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIV. CULTURAL RESOURCES. Would the proposal:				
a) Disturb paleontological resources?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Disturb archaeological resources?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Affect historical resources?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Have the potential to cause a physical change which would affect unique ethnic cultural values?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Restrict existing religious or sacred uses within the potential impact area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

a. *Potentially Significant Unless Mitigation Incorporated.* Although surveys of the project area have yet to be completed, the possibility exists that paleontological resources may be unearthed during project grading. Field surveys are required in order to identify the nature and extent of potentially significant impacts of the proposed project upon paleontological resources in the project area and any required mitigation measures. These potential impacts to paleontological resources can be mitigated through the provision of a cultural resources workshop for construction personnel and requiring a qualified paleontologist to examine any unearthed resources.

b. *Potentially Significant Unless Mitigation Incorporated.* Although surveys and records and literature checks have yet to be completed, the possibility exists that archaeological resources may be unearthed during project grading. Archaeological field surveys are required order to identify the nature and extent of potentially significant impacts of the proposed project upon archaeological resources in the project area and any required mitigation measures. These potential impacts to archaeological resources can be mitigated through the provision of a cultural resources

workshop for construction personnel and requiring a qualified archaeologist to examine any unearthed resources.

- c. *Potentially Significant Unless Mitigation Incorporated.* Although no recorded or observed historical resources exist in the areas to be devoted to project facilities, potential impacts to historical resources due to the proposed project may occur. Field surveys may be required in order to identify the nature and extent of potentially significant impacts of the proposed project upon historic resources in the project area and any required mitigation measures. These potential impacts to historical resources can be mitigated through project redesign to insure avoidance of these resources.
 - d. *No Impact.* The proposed project is not anticipated to cause any physical changes which could affect unique ethnic cultural values.
 - e. *No Impact.* The proposed project is not anticipated to restrict any existing religious or sacred uses.
- a.-e. Although the proposed wastewater treatment facilities do not directly impact any cultural resources, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact cultural resources in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential cultural resources impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XV. RECREATION. Would the proposal:				
a) Increase the demand for neighborhood or regional parks or other recreational facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Affect existing recreational opportunities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Substantiation:

- a. *No Impact.* The proposed project will not directly generate any new population or housing thereby not creating any demand for parks or other recreational facilities.

b. *No Impact.* The proposed project will not directly generate any new population or housing thereby not impacting any existing recreational opportunities.

a.-b. Although the proposed wastewater treatment facilities do not directly impact any recreation facilities, the proposed project could represent a reduction in or elimination of a potential constraint upon future development within areas to be served by the additional wastewater treatment capabilities associated with the proposed project. Future development of these areas could adversely impact recreation facilities in these areas. Future discretionary approvals will require the preparation and certification of additional environmental documentation to address the potential recreation impacts of these future approvals.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVI. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects and the effects of probable future projects.)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Substantiation:

a. *Less-Than-Significant Impact.* Provided that sensitive resources are avoided and all recommended mitigation measures are implemented, the proposed project would not have a substantial impact on biological or cultural resources.

V. Environmental Evaluation

*Southland Wastewater Treatment Facilities Improvements
Expanded Initial Study*

- b. *Potentially Significant Impact.* The proposed project involves the provision of additional facilities necessary to expand the treatment capabilities of the Southland Wastewater Treatment Facility thereby reducing or eliminating a potential constraint to future development within areas to be served by this additional wastewater treatment capability.

Although the proposed project would not directly cause a change in zoning or an increase in the intensity of currently-designated land uses, the proposed project will increase the wastewater treatment capabilities of the Nipomo Community Services District. As a result, the proposed project could represent a reduction or elimination of a potential constraint upon future development and has the potential to hasten the conversion of areas to more intense urbanized uses over those land uses currently allowed by the South County Area Plan. Any increase in density of change of land use to the South County Area Plan within the area to be served by the additional wastewater treatment capabilities associated with the proposed project would first require a General Plan Amendment and zone change.

Any future development within areas served by these additional wastewater treatment capabilities would also require a number of additional approvals including approval of a Specific Plan, Conditional Use Permit or tract map by the County of San Luis Obispo. These future discretionary approvals will require the preparation and certification of additional environmental documentation (CEQA) to address the potential land use and planning impacts of these future approvals.

- c. *Potentially Significant Impact.* The proposed project has the potential to foster growth or changes in land uses in areas served by the additional wastewater treatment capabilities associated with the proposed project particularly involving the conversion of agricultural lands. Potential growth-inducement involves a variety of factors including: removal of any impediments to growth such as the extension of roadways or utilities; the creation of development pressures in surrounding areas, particularly existing agricultural lands; growth-inducing impacts upon community services; and the establishment of any precedent-setting effects upon parcels within the South County/Nipomo Mesa area.

VI. ENVIRONMENTAL DETERMINATION

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment and a NEGATIVE DECLARATION will be prepared.	<input type="checkbox"/>
I find that although the project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described in this document have been added to the project. A NEGATIVE DECLARATION will be prepared.	<input type="checkbox"/>
I find that the project MAY have a significant effect on the environment and an ENVIRONMENTAL IMPACT REPORT is required.	<input type="checkbox"/>
I find that the project MAY have a significant effect(s) on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards and 2) has been addressed by mitigation measures based on an earlier analysis. If the effect is a potentially significant impact or potentially significant unless mitigated, an ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that need to be addressed.	<input type="checkbox"/>
I find that although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR, including project revisions or mitigation measures that are imposed upon the proposed project.	<input type="checkbox"/>

**Proposed Scope of Work and Fee Estimate
Pasquini Property Investigation
Nipomo, California**

Dear Mr. Buel:

Fugro is pleased to submit this proposal for a hydrogeologic investigation of the Pasquini property as part of the planned upgrade and expansion of the Nipomo Community Services District's Southland Wastewater Treatment Facility (WWTF). This proposal, which is provided at your request, presents our understanding of the proposed project, a proposed scope of work, fee estimate, and schedule to complete the work.

PROJECT UNDERSTANDING

It is our understanding that the District has an ultimate need to dispose of up to an additional 0.63 million gallons per day (MGD) of treated wastewater in supplemental percolation basins. This assumption is based on the ability of the existing Southland WWTF to accommodate about 0.57 MGD and various assumptions of future District build-out wastewater flow volumes. As the District plans for an upgrade and expansion of the facility to 1.2 MGD, a need was identified for alternative locations for effluent disposal. Previous Fugro studies assessed the feasibility for effluent disposal at the so-called Mesa Road site, evaluated various alternatives at the Southland site, and conducted a feasibility-level hydrogeologic and geologic hazards assessment of the Pasquini property. This phase of work is intended to conduct a more detailed investigation of the Pasquini property to provide the District and the District's engineering and environmental consultants sufficient information to adequately assess the potential of the property for development as a disposal site.

A member of the Fugro group of companies with offices throughout the world

SCOPE OF WORK

A feasibility level exploration program was previously conducted on the Pasquini property; the results are summarized in a Fugro report dated July 30, 2008. The conclusions presented in the report indicate the presence of low permeability layers at variable depths in the unsaturated zone particularly at depths below about 75 feet and within the southerly parts of the site. The continuity of these low permeability layers is not fully understood but create a concern relative to the ultimate fate of wastewater discharged in percolation ponds on the parcel. The preliminary conclusions are that discharge of wastewater in the northerly third of the parcel would be at a sufficient distance from the bluff of the floodplain of the Santa Maria River such that it would not daylight on the slope face.

The northerly third of the parcel is about 35 acres in size. Assuming 80 percent of this area could be developed to percolation basins and that the soils (subject to confirmation percolation testing) could be expected to percolate up to 10 gallons per day per square foot (gpd/ft²), then the 35-acre gross area may be able to accommodate the planned volume of the plant expansion. As the report indicated, however, additional field work is necessary to support those conclusions.

Since the time of the feasibility-level exploratory work conducted during the Spring and Summer of 2008, the property has been fully planted in strawberries. The intensive agricultural operations complicate performance of any additional efforts on the site by potentially limiting access and open areas to conduct the work. Furthermore, development of the agricultural operations has altered the conditions of the site from the time of the initial investigation through the significant irrigation loading of the strawberries. At least one high-production water well has been drilled at the site, and at the time of our field visit in late December 2008, significant irrigation return waters from the planted rows were ponding in low areas and running off the site and over the south-facing bluff overlooking the Santa Maria River. Significant erosion of the south-facing gullies was occurring, resulting in sediment deposition, emergence of springs, and return water runoff. The additional loading of the subsurface will have to be taken into account during this evaluation, if access to the site is developed.

To fully conduct a detailed site investigation to evaluate the suitability of the property for a large-scale effluent disposal facility, a multi-phased approach is recommended, as originally outlined in our July 30, 2008 report. We recommend a four-step approach, with a decision-point review between each step.

- The initial step includes the performance of a series of conventional percolation tests at the anticipated grade (elevation) of the base of the percolation basins. We recommend that the District first work with your engineers from AECOM to develop a conceptual plan for percolation basins at the site to provide a rough estimate of the anticipated elevation of the base of the percolation basins. Based on the approximate 35-acre gross area under consideration, we recommend a percolation test for every 4 acres of actual percolation basin area, or about 8 such tests.

If the anticipated base of the proposed ponds is at a sufficient depth to require digging a pit or shallow hole in order to run the percolation tests, we have assumed in the fee estimate that the District will dig the shallow hole or pit with District-owned equipment, to allow Fugro personnel to run the tests.

- Upon completion of the percolation tests, we will provide a brief technical memo describing the results of the tests, and provide up or down recommendations whether to proceed with the next step of the investigation or whether to re-evaluate the feasibility of the site for a large-scale facility.
- Critical to the success of the potential supplemental percolation basin facility is the ability of the wastewater to percolate and flow more or less vertically through the relatively deep unsaturated zone and merge with the water table of the deeper aquifer at an elevation below the base of the bluff (some 2000 feet to the southwest). The success of this is dependent on a better definition of the depth and continuity of any low permeability layers under the suggested 35-acre portion of the parcel. We recommend the drilling and construction of two groundwater monitoring wells (possibly completed in two different depth zones) in the proposed 35-acre area. The monitoring wells would be drilled under permit with the County of San Luis Obispo using the rotary wash method, geophysically electric logged, and appropriately completed in either an upper and/or deep aquifer zone depending on interpretation of the geophysical survey. The completed monitoring wells would be used to obtain water level data and background water quality data for the area. Ultimately, the monitoring wells could be used as part of Regional Water Quality Control Board points of compliance associated with Waste Discharge Requirements (WDRs) that would be developed for use of the parcel.

At the completion of the well drilling task, water samples will be obtained for water quality analyses. We will collect the samples and provide them to District staff for analysis at the District's contract laboratory. For budgeting purposes, we have assumed that the water quality analyses will be paid directly by the District, thus provision for water quality analyses is not included in our fee estimate.

For planning and budgeting purposes, we have assumed that it will be necessary to drill and construct two monitoring wells at the site. Once access to the site is granted and data is gathered relative to the drilling of the new water well(s) at the site, it may be possible to incorporate the results of the new wells into this program. If we can effectively eliminate the drilling of one or both of the monitoring wells by utilizing the newly drilled production wells, we will do so.

- The next step will be to construct a prototype percolation pond to allow for larger scale testing of the percolation capacity of the soil. A small percolation basin of approximately 20-foot square should be installed at the site. A metered supply of water from either a nearby hydrant or one of the proposed monitoring wells will be needed to charge the basin and estimate the percolation capacity of the soil. The

basin would be flooded with water to maintain a constant head above the bottom of the basin, and the test would be continued until a stabilized infiltration capacity for the basin could be obtained (typically in the range of 20 to 30 days). Casings would be installed in drilled holes, backfilled with native soils, to allow for hydro-probe monitoring during testing. The hydro-probe is a nuclear device that can be used to estimate the degree of saturation in the soil versus depth. The hydro-probe is particularly useful to evaluate whether or not the finer-grained soils encountered at various depths cause horizontal deflection of the infiltrated water.

We have assumed in the fee estimate that the District will provide the equipment and personnel to excavate the shallow test basin. Fugro personnel will be on site to log the test pit/basin and construct the prototype basin.

A small basin of approximately the size and shape of a prototype percolation pond was recently excavated in the northeast corner of the property. With the very close proximity of a hydrant on Orchard Drive, consideration will be given whether this small basin can be used for our tests.

- Upon completion of the prototype percolation pond, we will prepare a second technical memo that documents the results of the tests and provides recommendations whether to proceed with continued evaluation of the site. This will allow the District to make a decision before committing to the next step, which is the development of a numerical groundwater flow model.
- Based on the data obtained from the field work as outlined above, a numerical groundwater flow model will be constructed for the area to better predict the fate and transport of wastewater discharged into percolation basins, the shape and size of the anticipated effluent mound, and the expected relationship of the mound with the bluff face.
- The results of the work effort will be documented in a summary report, in which we will document the work performed, present findings and conclusions, and provide appropriate recommendations.

An electronic (pdf) copy of the draft report will be submitted to the District for review. After receiving comments from District staff, we will prepare a final report. Four (4) hard copies and 1 electronic (pdf) copy of the final report will be submitted.

SCHEDULE

Initial planning of the project, scheduling of contractors, and initial permitting work can begin with two weeks of receiving a Notice to Proceed (NTP). We understand that time is important for all these activities, so we are prepared to assign appropriate personnel to the tasks to accomplish the work as quickly as possible once we get started.

The initial work efforts, including the percolation tests and gathering the new site information about the water wells and estimated loading rates of the strawberry fields, is not dependent on outside contractors, thus that work can proceed directly. The timing of the drilling and construction of the monitoring wells is dependent on drill rig availability and backlog, which is typically about six weeks. The numerical modeling task cannot be completed until all the data is collected from the previous work tasks. Assuming that no difficulties are encountered with weather, weather-related site access, right-of-entry permits, and contractor availability, we estimate that approximately five months will be required to complete the work.

FEE

We will provide our services on a time and expense basis according to the attached fee schedule rates. Our anticipated fee for these efforts is shown on the attached Fee Estimate (Plate 1). As shown on Plate 1, the estimated fee is \$128,800, including all subcontractor charges.

We appreciate the opportunity to continue working with you and the District on this project. Please contact us if you have questions or require additional information.

Sincerely,
FUGRO WEST, INC.

Attention: *Mr. Bruce Buel*
General Manager

**Proposed Scope of Work and Fee Estimate
Kaminaka Property Investigation
Nipomo, California**

Dear Mr. Buel:

Fugro is pleased to submit this proposal for a hydrogeologic feasibility investigation of the Kaminaka property as part of the planned upgrade and expansion of the Nipomo Community Services District's Southland Wastewater Treatment Facility (WWTF). This proposal, which is provided at your request, presents our understanding of the proposed project, a proposed scope of work, fee estimate, and schedule to complete the work.

PROJECT UNDERSTANDING

It is our understanding that the District has an ultimate need to dispose of up to an additional 0.63 million gallons per day (MGD) of treated wastewater in supplemental percolation basins. This assumption is based on the ability of the existing Southland WWTF to accommodate about 0.57 MGD and various assumptions of future District build-out wastewater flow volumes. As the District plans for an upgrade and expansion of the facility to 1.2 MGD, a need was identified for alternative locations for effluent disposal. Previous Fugro studies have assessed the feasibility for effluent disposal at the so-called Mesa Road site, the Pasquini property, and various alternatives at the Southland site. This phase of work is intended to conduct a similar feasibility-level investigation at the Kaminaka property.

SCOPE OF WORK

One option under consideration for the upgrade and expansion of the WWTF is to develop new site(s) for percolation ponds. This feasibility-level exploration program is proposed to evaluate the 40-acre Kaminaka lot, located between Pomeroy and Calle Caballo in Nipomo.

A member of the Fugro group of companies with offices throughout the world

Cone Penetrometer Testing

A screening level feasibility program will be conducted using Fugro's Cone Penetrometer Testing (CPT) rig to investigate subsurface conditions at the site. The CPT is an excellent tool for this level of investigation because it pushes a small diameter probe into the subsurface materials, and measures tip resistance at the end of the probe to provide a rapid qualitative evaluation of soil properties, consistency of the materials, and spatial variability of materials. We anticipate advancing six CPT holes on the Kaminaka property.

Although the CPT can be an effective tool for rapid delineation of soil properties and a valuable tool for site screening, it should be noted that there are potential limitations should the subsurface materials be particularly dense or hard. If a sufficiently thick clay layer (aquitar) is present, the CPT may not be able to penetrate the clay; however, such information is particularly informative for this type of study. Key issues to address in these investigations include percolation capacity, local geology and hydrogeology, depth to groundwater, and presence of near-surface retarding clay layers.

Hollow Stem Auger Drilling and Sampling, and Laboratory Testing

If the results of the feasibility level CPT screening program appear favorable, we will proceed directly with the drilling of two hollow-stem auger borings at the site. At the Kaminaka property, the borings will be drilled to a depth of approximately 120 to 150 feet to verify soil conditions, percolation capacity, and stratigraphy. In all hollow-stem auger borings, undisturbed subsurface samples will be obtained and laboratory analyses run in order to obtain grain-size analyses (a direct indication of permeability), and obtain estimates of sustained infiltration rates based on laboratory-determined permeability values.

Monitoring Well Installation, Sampling, and Water Quality Testing

The feasibility of implementing a suitable percolation pond facility is dependent not only on the surface or near-surface infiltration capability of the site, but also on the characteristics of the deep receiving aquifer, the characteristics of the unsaturated zone, the thickness of the unsaturated zone (depth to groundwater), and the water quality of the receiving aquifer. To adequately evaluate these factors requires drilling and construction of a monitoring well that penetrates the full thickness of the unsaturated zone and into the upper portion of the water table.

The depth to groundwater and thickness of the unsaturated zone necessitates the use of a water well drilling rig to drill and install a monitoring well. A well drilling permit will be obtained and the well will be drilled, geophysical electric-logged, and cased with 4- or 5-inch diameter PVC casing, suitable for measuring and monitoring fluctuations in water levels as well as for sampling the deep aquifer for water quality characteristics. The well will be drilled and constructed to State and local standards for water well construction.

At the completion of the well drilling task, a water sample will be obtained for water quality analysis. We will collect the sample and provide it to District staff for analysis at the

District's contract laboratory. For budgeting purposes, we have assumed that the water quality analysis will be paid directly by the District, thus provision for a water quality analysis is not included in our fee estimate.

Report Preparation

The results of the work effort will be documented in a summary report, in which we will document the work performed, present findings and conclusions, and provide appropriate recommendations. The report will provide summaries of the data, logs of the CPT and HSA explorations, and a series of cross sections showing the plotted data and interpreted subsurface conditions. The report will also document the drilling of the test well and provide the results of the water quality testing.

An electronic (pdf) copy of the draft report will be submitted to the District for review. After receiving comments from District staff, we will prepare a final report. Four (4) hard copies and 1 electronic (pdf) copy of the final report will be submitted.

SCHEDULE

Initial planning of the project, scheduling of contractors, and initial permitting work can begin with two weeks of receiving a Notice to Proceed (NTP). We understand that time is important for all these activities, so we are prepared to assign appropriate personnel to the tasks to accomplish the work as quickly as possible once we get started.

The work efforts will be partly dependent on CPT and drill rig availability. Typical backlog of the CPT rig is about one month. Typical backlog of a water well drilling rig is about six weeks. In the interim, however, work can proceed on gaining property access and permits. Assuming that no difficulties are encountered with weather, weather-related site access, right-of-entry permits, and contractor availability, we estimate that approximately three months will be required to complete the work.

FEE

We will provide our services on a time and expense basis according to the attached fee schedule rates. Our anticipated fee for these efforts is shown on the attached Fee Estimate (Plate 1). As shown on Plate 1, the estimated fee is \$81,100, including the CPT rig and laboratory charges, and all subcontractor charges for the HSA and water well drilling contractors. The labor costs and estimated fees shown here are slightly less than the equivalent work previously conducted at the Mesa Road site and the Pasquini property.

We appreciate the opportunity to continue working with you and the District on this project. Please contact us if you have questions or require additional information.

Sincerely,
FUGRO WEST, INC.
